REVOTEK™ LC

LIGHT-CURED RESIN FOR PROVISORIAL CROWNS, BRIDGES, INLAYS & ONLAYS

REVOTEK LC is a new light-cure single-component sculptable composite resin for temporary inlays, onlays, crowns and bridges.

For use only by a dental professional in the recommended indications.

RECOMMENDED INDICATIONS

Fabrication of temporary crowns, bridges, inlays and onlays.

CONTRAINDICATIONS

Avoid use of this product in patients with known allergies to methacrylate monomer or methacrylate polymer.

DIRECTIONS FOR USE

1. DIRECT METHOD (in the patient's mouth)
A Temporary Crown & Bridges

1. Transfer of putty stick to the storage case
2. Transfer putty stick from the aluminum foil back into the storage case provided in the Introductory Set.

1) When putty stick is transferred to the storage case or is dispensed, handle with care in order to not damage the structure of the case. When paste is replaced, make sure that the inside of the case is clean. If it is dirty, clean with cotton moistened with alcohol.

2. Dispensing material
Dispense the required amount of material using the spatula. Adjust the shape of paste with gloved fingers to allow easy placement onto the abutment. To soften the material, lightly knead several times with the fingers.

1) Do not work up before use. The material will become sticky, making it much more difficult to use.
2) Do not knead excessively, or the material will become sticky.

3. After dispensing, immediately close the storage case to protect the material from light.

4. Preparation for pressing material onto the abutment
Make preparations in such a way as to ensure that the mass of material fits into the space between the abutment and the adjacent tooth. It is effective to shape the material in advance so that it goes into the space easily (Picture A-3a), or to put another piece in the space before the mass is pressed onto the abutment (Picture A-3b).

Note:
If any undercuts are present on the abutment, block out with wax before placing material.

5. Pressing material onto the abutment
Press the material onto abutment and roughly contour with the fingers or spatula.

6. Pressing material onto abutment and roughly contour with the fingers or spatula.
Apply COCOA BUTTER or Vaseline to the fingers or spatula to help shape the material more easily.

7. Application of material
Apply the material to the surface of the preparation, including the (VLC) glass ionomer base (inlay).

8. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

9. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

10. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

11. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

12. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

13. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

14. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

15. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

16. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

17. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

18. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

19. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

20. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

21. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

22. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

23. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

24. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

25. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

26. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

27. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

28. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

29. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

30. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

31. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

32. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

33. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

34. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

35. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

36. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

37. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

38. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

39. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

40. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

41. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

42. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

43. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

44. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

45. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

46. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

47. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

48. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

49. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

50. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

51. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

52. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

53. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

54. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

55. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

56. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

57. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

58. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

59. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

60. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

61. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

62. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

63. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

64. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

65. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

66. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

67. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

68. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

69. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

70. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

71. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

72. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

73. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

74. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

75. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

76. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

77. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

78. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

79. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

80. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

81. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

82. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

83. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

84. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

85. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

86. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

87. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

88. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

89. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

90. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

91. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

92. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

93. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

94. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

95. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

96. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

97. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

98. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

99. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

100. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

101. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

102. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

103. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

104. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

105. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

106. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

107. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

108. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

109. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

110. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

111. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

112. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

113. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

114. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

115. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

116. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

117. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

118. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

119. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

120. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

121. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

122. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

123. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

124. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

125. Pressing material into the cavity
Press the material into the cavity and roughly contour with the fingers or spatula.

REVOTEK™ LC

LICHTHÄRTENDE KUNSTSTOFF FÜR PROVISORISCHE KRONEN UND BRÜCKEN, INLAYS UND ONLAYS

REVOTEK LC ist ein neues, lichthärtendes plastisches Komposit Resin für provisorische Kronen, Brücken, Inlays und Onlays.

Zur Benutzung nur durch Zahnärzte bei den empfohlenen Indikationen!

INDIKATION

Herstellung von provisorischen Kronen, Brücken, Inlays & Onlays

CONTRAINDICATIONS

Dieses Produkt darf nicht an Patienten verwendet werden, die eine Allergie gegen Methacrylatmonomer oder Methacrylatpolymer haben.

GEBRAUCHSANWEISUNG

1. DIREKTE METHODE (im Mund des Patienten)
A. Provisorische Kronen & Brücken

1. Überführen des Putty Sticks in die Aufbewahrungsdose
Überführen Sie den Putty Stick aus der Folienverpackung in die Aufbewahrungsdose, die in der Erstausrüstung mitgeliefert wird.

Anmerkung:
Wenn Sie den Putty Stick in die Aufbewahrungsdose geben, oder ihn herausnehmen, achten Sie bitte darauf, Verunreinigungen zu vermeiden!

2. Entnahme des Materials
Entnehmen Sie die benötigte Menge mit dem Spatel.

3. Bringen Sie die Paste mit behandschuhten Fingern in eine Form, die es Ihnen leicht ermöglicht, die Paste auf die Brücke aufzutragen. Kneten Sie die Paste einige Male mit den Fingern, um sie zu erweichen.

Anmerkung:
1) Bitte nicht vor dem Gebrauch erwärmen! Dadurch wird das Material klebrig und schwer zu verarbeiten.
2) Kneten Sie die Paste nicht übermäßig, „auch dadurch wird sie klebrig!“

3. Verarbeiten Sie die Paste nach Entnahme der Paste die Verpackung, um die nicht benötigte Paste vom Finger zu entfernen.

4. Vorbereitung für das Auftragen der Paste auf die Brücke
Stellen Sie sicher, dass die Lücke in den Raum zwischen Brücke und den angrenzenden Zahn passt. Sinnvoll ist es, die Paste vorher so zu formen, dass sie leicht in den Zahnräum passt (Abb. A-3a), bzw. eine andere Paste in den Raum zu füllen, bevor die Paste eingepresst wird (Abb. A-3b).

Note:
Wenn es Unterschreitungen auf dem Zahnturmup gibt, füllen Sie diese bitte vorher mit Wachs aus, bevor Sie die Paste auf das Zahnturmup pressen.

5. Anpressen des Materials auf dem Zahnturmup
Pressen Sie das Material auf das Zahnturmup, und formen Sie es grob mit den Fingern oder einem Spatel.

Anmerkung:
Geben Sie COCOA BUTTER oder Vaseline auf die Finger oder den Spatel um das Material leichter formen zu können und die Oberfläche glatter zu machen.

6. Formen des Materials - erster Schritt
Lassen Sie den Patienten leicht auf das Material beißen, um die okklusale Oberfläche abzurunden und korrigieren Sie diese, wenn nötig. Richten Sie ebenso den Rand der buccalen Oberfläche her.

7. Formen des Materials - zweiter Schritt
Formen Sie den Rand wie benötigt. Entfernen Sie überschüssiges Material mit einem geeigneten Instrument.

8. Endgültige Härterung
Die endgültige Härterung wird ausserhalb des Mund durchgeführt. Für die Lichthärtung finden Sie Empfehlungen und Notizen unter Punkt A8.

9. Korrektur, Finish und Polieren
Folgen Sie den Anweisungen und Notizen unter Punkt A9 beschrieben sind.

10. Fertigstellung
Folgen Sie den Anweisungen und Notizen unter Punkt A10 beschrieben sind.

11. Reparatur
Folgen Sie den Anweisungen und Notizen unter Punkt A11 beschrieben sind.

12. Reparatur
Folgen Sie den Anweisungen und Notizen unter Punkt A12 beschrieben sind.
