INSTRUCTION FOR USE
SteriPulp

COMPOSITION
Formaldehyde, Phenol, filler

PROPERTIES
Phenol and Formaldehyde are antiseptics denaturalizing microorganisms' proteins, thus providing antiseptic effect, deep mummification and root canals sterilization.
Liquid is produced for using in aggressive biological medium with the temperature range between 32°C and 42°C (in oral cavity at the temperature (37±1)°C and humidity 60-90 %).

INDICATIONS
SteriPulp is used as antiseptic for treatment of infected root canals in complicated pulpitis and resection of upper part of tooth root

CONTRAINDICATIONS
Drug idiosyncrasy
Do not misuse

SIDE EFFECTS
As far as all terms of storing, transporting and application are observed, there are no side effects

METHOD OF USE
SteriPulp should be applied with the use of saturated and carefully squeezed cotton swabs, avoiding any leakage of the liquid, and left in tooth canal orifice for 2-3 days.
Saturated with SteriPulp cotton swabs can be used for treatment of infected root canals or as a temporary application.
In 2-3 days pull out a cotton swab, treat the canal one more time and fill the sterile root canal with sealer EugeSeal

PRESENTATION
SteriPulp (bottle) 15ml 004-04-015

STORAGE
Store at the temperature from 5°C to 25°C
Keep in dry place
Tightly close container immediately after use
Do not use after expiry date
Shelf life – 3 years
